

# Team Foundation Server Jumpstart

## JUMPSTART OVERVIEW

The jumpstart will get your organization and development teams up and running with TFS and migrate your existing projects within a 2 week engagement. If you are already using TFS, we will show you how to maximize your TFS investment by extending its capabilities beyond just source control management.

## DELIVERABLES

- Envisioning and assessment
- TFS Implementation
- Documentation
- Training and knowledge transfer

## DELIVERON JUMPSTART BENEFITS

### Are you looking to get started with Team Foundation Server?

- Keep your development teams working on current projects while Deliveron installs and configures your TFS environment
- Save time, resources and frustration by leveraging Deliveron's expertise and proven experience with TFS deployments
- One of the major benefits realized by our clients taking advantage of the jumpstart program is the ability to incorporate best practices and quickly getting the installation done right the first time

### Wanting to fully leverage Team Foundation Server?

- Improve the quality of software configuration management by taking advantage of continuous integration builds and automated deployments
- Gain visibility and insight to your software development projects by customizing TFS to improve your Application Lifecycle Management (ALM) strategy
- Maximize your investment in TFS by leveraging valuable productivity features such as TFS power tools and Visual Studio Team System Database Professional

### New Features in Team Foundation Server 2010

- Hierarchical Work Items
- Gated Check-Ins
- Team Build built on Windows Workflow
- TFS Supports NLB for the AppTier and SQL Server scaling across multiple servers
- Better Project Management and Reports with Excel
- New Agile Template that supports Velocity, Iterations, Stories, Points, and Tasks.
